

WARNING:

Always practice installing tire chains before you actually need them. Tire sizes can vary by manufacturer therefore it is important to check for proper fit before the actual need arises. Never exceed 30 MPH while the chains are installed. Accelerate slowly and evenly. Avoid spinning your tires. The life of your chains will vary according to road conditions, driving speed and individual driving habits.

The Following are some activities that can cause unnecessary wear to your tire chains:
Locking your wheels when braking • Driving on bare pavement that is not covered with snow or ice • Hitting curbs • Installing the chains improperly

CAUTION:

Tire chains are designed only to provide extra traction in severe winter weather emergencies. Riders should always exercise caution and observe driving conditions during hazardous weather. Please use good judgment in using this product. In the event that a cross-chain should break, immediately pull off the road to a safe place and remove, or tie back the cross chain. Do not continue driving with a broken cross chain. Bicycle fork and frame clearance for traction devices is the responsibility of the bicycle owner. Use tire chains only as a traction device. Do not use them for any other purpose, including towing or lifting.
